

Supplementary Figure S2. The effect on maximum SCT for 50 mg protein input with increasing quantities of injected digested SH-EGFR del-TAP eluate onto the LC-MS system. Blue (3%), red (5%), green (10%) and purple (20%). For the injected quantities of 3, 5 and 10%, n = 4 and for 20%, n = 2. Note that the SCT appear to decrease for the 20% injection as the total number of analyses is two, whereas for the 3, 5 and 10% injections the number of analyses is four.
